

xStore payment scenarios

Backend handoff · as of 3 October 2026 · amounts are examples

xStore takes no card payments: every pound moves as cash at the door or as a manual transfer, so the backend must keep a ledger line for each movement. This document lists 38 payment scenarios; the 17 marked P0 are needed for launch, because without them money goes unrecorded or a vendor or courier is never settled.

Money map

Buyers pay cash; xStore earns through fees and courier cash

Only two arrows end at xStore: courier cash handovers and vendor fee payments. Both need an admin confirmation with evidence before a balance changes.

Rules for every money movement

- **Ledger, not totals:** every movement is a line with who, amount, direction, order, time, admin and evidence. Never edit a line; correct it with a new one.

- **Idempotency:** the same event (for example a second “delivered”) can never create a second fee, payout or cash line.
- **Fixed at the time:** prices, shipping, discount and the fee are stored on the order when they happen and never recalculated.
- **Rounding:** EGP with 2 decimals, rounded half-up.
- **Evidence:** every approval keeps a receipt image or transfer reference. These are financial records; keep them.
- **Limits from settings:** warn, pause and courier handover limits come from admin settings, not app constants.
- **Notify:** every change to someone's money sends a notification (see the notification triggers handoff).
- **No card payments yet:** the app still contains unused card values (CIB, Dahabi, BaridiMob). The API should accept COD only until a gateway such as Paymob or Fawry is added.

Priority: P0 = needed for launch · P1 = first month after launch · P2 = later. Messages are examples; final copy follows the notification triggers handoff.

A. Buyer checkout and COD (vendor self-delivery)

Most orders today: the vendor delivers and collects the cash, so xStore never touches the buyer's money and only earns its fee later.

ID	Scenario	What happens to the money	Backend must	Notify (EN)	Notify (AR)	Priority
A1	Buyer places a COD order	Nothing moves yet. Total = items + shipping – discount, fixed at checkout.	Save subtotal, shipping, discount, total and the fee in effect on the order; never recalculate later.	Order #1042 received. Pay EGP 1,250 on delivery.	تم استلام طلبك رقم #1042. ادفع 1,250 ج.م عند الاستلام.	P0
A2	Order cancelled before delivery (buyer, vendor or auto-cancel)	No money moved; nothing is owed.	Fee status → voided; never touches the vendor wallet.	Order #1042 was cancelled: reason.	تم إلغاء الطلب #1042: السبب.	P0
A3	Vendor delivers and the buyer pays the full total in cash	Vendor keeps the whole amount, shipping included, and now owes xStore the flat fee.	Mark paid; fee pending → due exactly once, guarded against repeated “delivered” events.	Vendor: Order #1042 delivered. EGP 15 fee added to your wallet.	التاجر: تم توصيل الطلب #1042. أضيفت رسوم 15 ج.م إلى محفظتك.	P0
A4	Buyer refuses at the door before paying	No cash collected.	Order → DeliveryFailed (or Cancelled, reason “refused”); fee voided; count the refusal on the buyer.	Buyer: We couldn't deliver order #1042.	المشتري: لم تتمكن من توصيل طلبك رقم #1042.	P0
A5	Buyer accepts some items and refuses the rest	Vendor collects only for the accepted items, plus shipping.	Track amounts per order item and record the amount actually collected; the flat fee is still due once.	Buyer: You paid EGP 900 for 2 of 3 items in order #1042.	المشتري: دفعت 900 ج.م مقابل منتجين من 3 في الطلب #1042.	P1

ID	Scenario	What happens to the money	Backend must	Notify (EN)	Notify (AR)	Priority
A6	Buyer uses a coupon	Buyer pays the discounted total; whoever issued the coupon pays the discount.	Store the coupon issuer (xStore or vendor). xStore coupon: credit the discount to the vendor wallet. Vendor coupon: vendor absorbs it.	—	—	P1
A7	Vendor marks delivered but the buyer says it never arrived	Disputed: cash may or may not have changed hands.	Let the buyer report “not received” within 48 h of delivery; freeze the fee and open a dispute (E4).	Buyer: We're looking into order #1042.	المشتري: نراجع مشكلة الطلب #1042.	P1
A8	Buyer refuses COD orders repeatedly	Each refusal costs the vendor or courier a wasted trip.	Count refusals per buyer; after 2 in 30 days, require a phone confirmation before the next COD order.	Buyer: Please confirm your order by phone to continue.	المشتري: من فضلك أكّد طلبك هاتفياً للمتابعة.	P1

B. xStore courier delivery

When the vendor picks “Delivered by xStore”, our courier collects the buyer's cash and xStore owes the vendor its share. This is the only place we hold other people's money, so it needs the strictest records.

ID	Scenario	What happens to the money	Backend must	Notify (EN)	Notify (AR)	Priority
B1	Courier delivers and collects the full COD total	Cash is in the courier's hand. xStore owes the vendor total – shipping – fee.	Add to the courier's cash in hand; create a vendor payout line (no wallet debt for this order).	Vendor: Order #1042 delivered by xStore. EGP 1,165 will be in your next payout.	التاجر: تم توصيل الطلب #1042 بواسطة xStore. سيصلك 1,165 ج.م في الدفعة القادمة.	P0
B2	Courier's cash reaches the handover limit (EGP 5,000)	Courier must deposit before taking new COD tasks.	Block new COD assignments until handover. The limit should be an admin setting (the app hard-codes 5,000 today).	Courier: You hold EGP 5,000. Hand it over before new COD orders.	المندوب: معك 5,000 ج.م. سلّمها قبل طلبات جديدة.	P0
B3	Courier hands over cash and an admin confirms the amount	Courier balance drops by the confirmed amount.	Handover record: amount, admin, time, receipt or photo, and the orders it covers.	Courier: Handover of EGP 5,000 confirmed.	المندوب: تم تأكيد تسليم 5,000 ج.م.	P0
B4	Courier hands over less than recorded	The shortage is owed by the courier.	Record the shortage as courier debt and alert the owner; the next handover must cover it.	Courier: Handover short by EGP 200. Please settle it.	المندوب: التسليم ناقص 200 ج.م. من فضلك سدّد الفرق.	P0
B5	xStore pays the vendor for courier-delivered orders	Money moves xStore → vendor weekly, by InstaPay or mobile wallet.	Not built: weekly payout batch per vendor (orders, total, fee deducted), payout record with transfer reference, vendor statement.	Vendor: Payout of EGP 4,820 sent to your InstaPay.	التاجر: تم إرسال 4,820 ج.م إلى إنستاباي الخاص بك.	P0

ID	Scenario	What happens to the money	Backend must	Notify (EN)	Notify (AR)	Priority
B6	Buyer refuses at the door on a courier order	No cash. The courier brings the parcel back to the vendor.	Order → DeliveryFailed; create a return-to-vendor task; record who pays the wasted trip (see decisions).	Vendor: Order #1042 was refused. The courier is bringing it back.	التاجر: رُفُض الطلب #1042. المندوب يعيده إليك.	P1
B7	Courier loses the cash or the parcel	xStore is short (cash) or owes the vendor (parcel).	Incident record; courier liability per contract; xStore compensates the vendor for a lost parcel.	Vendor: We're compensating you for order #1042.	التاجر: سنعوّضك عن الطلب #1042.	P2

C. Vendor platform fee

On self-delivered orders the vendor holds the cash, so the fee becomes a debt the vendor pays by InstaPay or mobile wallet with a receipt. The warn and pause limits stop that debt from growing.

ID	Scenario	What happens to the money	Backend must	Notify (EN)	Notify (AR)	Priority
C1	Fee accrues when a self-delivered order is delivered	Vendor owes the flat fee for that order.	Fee = the admin-set flat EGP amount in effect at delivery; never recalculated if the admin changes it later.	See A3	انظر A3	P0
C2	Balance crosses the warn limit	Vendor keeps selling and is reminded to pay.	Set exceedsWarnThreshold; notify once per crossing, not on every order.	You owe EGP 100 in fees. Pay before EGP 200 to keep selling.	عليك رسوم 100 ج.م. ادفعها قبل 200 ج.م. لتستمر في البيع.	P0
C3	Balance crosses the pause limit	Vendor can't publish new listings.	Set exceedsPauseThreshold; block new listings and also hide live ones (not done today, so a paused vendor can still sell).	Your store is paused until you pay EGP 200.	تم إيقاف متجرك مؤقتًا حتى تدفع 200 ج.م.	P0
C4	Vendor sends a payment and uploads the receipt	Money already sent outside the app; the claim is Pending.	POST /api/vendor/commission-payments (method, amount, receipt); balance unchanged until approved.	We received your EGP 300 payment and will review it within 24 hours.	استلمنا دفعتك بقيمة 300 ج.م. وسنراجعها خلال 24 ساعة.	P0
C5	Admin approves, possibly lowering the amount to what the receipt shows	Balance drops by the approved amount; the store unpauses once below the limit.	One transaction; Pending requests only (409 otherwise) so a double click can't deduct twice.	Your payment of EGP 300 was approved.	تمت الموافقة على دفعتك بقيمة 300 ج.م.	P0
C6	Admin rejects with a reason	Balance unchanged.	Reason required and shown to the vendor.	Payment of EGP 300 rejected: receipt unclear.	تم رفض دفعتك بقيمة 300 ج.م: الإيصال غير واضح.	P0

ID	Scenario	What happens to the money	Backend must	Notify (EN)	Notify (AR)	Priority
C7	Vendor pays part of the balance, or pays several times	Each approved payment lowers the balance.	Allow several Pending requests; apply payments to the oldest fees first so statements reconcile.	See C5	انظر C5	P1
C8	Vendor pays more than they owe	The extra money sits with xStore.	Keep it as credit against future fees (balance must be allowed below zero); today the floor at 0 loses it.	EGP 50 extra was saved as credit.	تم حفظ 50 ج.م زيادة كرصيد لك.	P1
C9	The same receipt is submitted twice	Risk of counting one payment twice.	Ask for the transfer reference number; reject a repeated reference or image.	See C6	انظر C6	P1
C10	Fee reversed after a return or a refused delivery	Balance drops by that order's fee.	Reverse with a separate negative ledger line, never by editing the original.	EGP 15 fee for order #1042 was reversed.	تم إلغاء رسوم 15 ج.م عن الطلب #1042.	P1
C11	Admin changes the fee amount	Only orders delivered after the change use the new fee.	Store the fee on each order at delivery.	All vendors: From 1 Nov the platform fee is EGP 15 per order.	كل التجار: بداية من 1 نوفمبر رسوم المنصة 15 ج.م لكل طلب.	P1
C12	No pay-to account set for a payment method	Vendor can't pay by that method.	Keep commission_payment_accounts filled for all four methods; the app shows "contact support" otherwise.	—	—	P1
C13	Vendor banned or deleted while owing fees	The debt remains.	Tie the debt to phone and national ID; block re-registration until paid.	Email: Your account is closed with EGP 450 unpaid.	بريد: تم إغلاق حسابك وعليك 450 ج.م غير مسددة.	P2

D. Package delivery (Send a package)

The sender pays the courier in cash at pickup, so xStore collects the whole price and no vendor share is involved.

ID	Scenario	What happens to the money	Backend must	Notify (EN)	Notify (AR)	Priority
D1	Admin prices the request	Nothing moves; the requester sees the price.	Store the price and who set it; the price can't change after confirmation.	Your package delivery costs EGP 60. Confirm to book a courier.	تكلفة توصيل طردك 60 ج.م. أؤكد لحجز مندوب.	P0
D2	Requester cancels before pickup	No money moved.	Allowed only before pickup.	Your package request was cancelled.	تم إلغاء طلب توصيل الطرد.	P1

ID	Scenario	What happens to the money	Backend must	Notify (EN)	Notify (AR)	Priority
D3	Courier collects the price at pickup	Cash is in the courier's hand, owed to xStore.	Add to the courier's cash in hand (same handover as B2–B4).	Sender: Package picked up. EGP 60 paid.	المرسل: تم استلام الطرد ودفعت 60 ج.م.	P0
D4	Sender won't pay at pickup	No money; the courier leaves without the parcel.	Request → cancelled with a reason; count it against the requester.	Package request cancelled: payment not made at pickup.	تم إلغاء طلب الطرد: لم يتم الدفع عند الاستلام.	P1
D5	Delivery fails after pickup (recipient absent)	The price is already paid.	Return the parcel to the sender and keep the price for the trip; charge a second attempt again (recommended).	We couldn't deliver your package. It's coming back to you.	لم تتمكن من توصيل طردك. سيعود إليك.	P2

E. Returns, refunds and disputes (not built yet)

None of this exists in the app or the backend yet. Buyers pay cash, so a refund always means cash going back; xStore's own money is at risk only on courier orders.

ID	Scenario	What happens to the money	Backend must	Notify (EN)	Notify (AR)	Priority
E1	Return on a self-delivered order	Vendor refunds the buyer in cash and takes the item back.	Return request: requested → approved / rejected → refunded; on refunded, reverse the fee (C10).	Buyer: Your refund of EGP 1,250 for order #1042 is complete.	المشتري: تم استرداد 1,250 ج.م عن الطلب #1042.	P1
E2	Return on a courier-delivered order	xStore refunds the buyer. Vendor not paid yet: drop the order from the payout. Already paid: the vendor owes it back.	Admin approves, not the vendor; exclude from payout or add a clawback line to the vendor wallet; create a reverse-pickup courier task.	Vendor: Order #1042 was refunded. EGP 1,165 deducted from your next payout.	التاجر: تم استرداد الطلب #1042. حُصم 1,165 ج.م من دفعتك القادمة.	P1
E3	Partial refund, buyer keeps the item	Vendor gives back part of the price.	Order adjustment record (amount, reason); the fee is not reversed.	Buyer: You received EGP 200 back for order #1042.	المشتري: استرددت 200 ج.م عن الطلب #1042.	P2
E4	Buyer escalates a rejected return or a missing refund	Money is frozen until an admin decides.	Dispute with evidence from both sides; admin decides refund / partial / reject, which then runs E1 or E2.	Both: xStore has decided the dispute on order #1042.	الطرفان: أصدرت xStore قرارها في نزاع الطلب #1042.	P1
E5	Return window ends	No more return requests.	Check the window on the server, not only in the app.	—	—	P1

Owner decisions: recommended defaults

These are business calls, not engineering ones. Each has a default so backend isn't blocked; change any before it goes into a sprint.

Decision	Recommended default	Why
Who pays a coupon discount	xStore coupons: xStore, credited to the vendor wallet. Vendor coupons: the vendor.	The issuer chose to give the discount, so the issuer pays.
Vendor overpays fees	Keep it as credit against future fees.	No refund transfer to make, and the vendor sees it used.
Payout for courier orders	Weekly on Sunday, for orders delivered 3+ days earlier, by InstaPay or wallet, fee deducted.	The 3-day gap covers most refusals and returns before money leaves.
Wasted trip on a refused courier delivery	xStore absorbs the first one; repeat refusers lose COD (A8).	Keeps vendors using xStore delivery while stopping abuse.
Paused vendor's live listings	Hide them until the balance is below the pause limit.	Otherwise pausing doesn't stop new debt.
Return window	14 days from delivery (Egypt Consumer Protection Law 181/2018; confirm with legal).	Matches the legal minimum buyers expect.
Delivery fee on returns	Refunded only when the vendor is at fault (defective, wrong item, not as described).	A buyer who changed their mind shouldn't cost the vendor a trip.
Unsettled courier shortage	Deduct from the courier's pay if not settled within 7 days.	Cash shortages must not roll over.
Vendor paused for a long time	Suspend the account after 30 days paused with no payment; start collections.	Stops dormant debt growing.
