

xStore — Full App Feature User Stories

Every built and planned feature, by role · prepared 2026-08-09

xStore has three user roles — **Consumer** (buyer), **Vendor** (seller), and **Courier** (platform-employed delivery). This document lists every feature in the app as a user story, grouped by role, sourced directly from the current codebase (screens, routes, and providers) rather than from memory — so it reflects what actually exists today, not just what was planned.

Status legend

- **Built** — implemented client-side and (unless noted) working end-to-end against a live backend.
- **Partial** — implemented client-side, but blocked, degraded, or mocked because of a backend gap. The note explains exactly what's missing.
- **Stub** — UI exists (often an honest "coming soon" placeholder) but the feature isn't functionally built yet.

Cross-cutting backend gap — read this before the tables

There is currently **no Orders / Checkout / Payment backend** at all — no endpoints exist anywhere in the hosted API for creating an order, transitioning its status, or recording payment. Every order, cart-checkout, vendor-order, and courier-delivery story below is fully built and tested on the client against realistic mock data, but is marked **Partial** where it depends on this missing backend. Separately, live probing found **/api/listings** hard-requires X-Latitude/X-Longitude headers (a deliberate 50km radius filter, not a bug) that the app doesn't yet send, and **/api/auth/forgot-password** 500s in production due to an unconfigured SMTP relay.

PART A — Consumer (Buyer)

A1. Onboarding & Account Access

ID	User story & acceptance criteria	Status
C-01	As a first-time user, I want a short onboarding intro, so that I understand what xStore offers before signing up. Shown once, pre-auth; skip or continue to register/login.	Built
C-02	As a new buyer, I want to register with just my phone number, so that I can create an account without a lengthy form. Phone-based registration; role defaults to consumer; followed by native OTP verification.	Built
C-03	As a returning buyer, I want to log in with my phone number, so that I can access my saved account. Login keyed on phoneNumber (not email); password or OTP path.	Built
C-04	As a user, I want to verify my phone with a one-time code, so that my number is confirmed as mine. Native OTP screen with resend.	Built
C-05	As a user, I want to sign in with Google and then choose buyer or vendor, so that I don't have to fill in a manual form. Social-role screen shown post-Google-auth to pick the role.	Built
C-06	As a user who forgot my password, I want to request a reset, so that I can regain access to my account. Forgot/reset password screens exist, but POST /api/auth/forgot-password 500s in production (unconfigured SMTP relay) — password reset is unusable end-to-end until backend fixes the mail credentials.	Partial

A2. Browse & Discover

ID	User story & acceptance criteria	Status
C-07	As a buyer, I want a home feed of categories and deals, so that I can quickly find something to buy. Home composes banners + categories + listings client-side. Depends on /api/listings, which now 400s without X-Latitude/X-Longitude headers the app doesn't send — home/explore can return empty in production until a location-permission UX ships.	Partial
C-08	As a buyer, I want to search and filter products in an Explore screen, so that I can find specific items. Same /api/listings location-header dependency as Home.	Partial
C-09	As a buyer, I want to browse by category, so that I can shop a specific type of product. Category taxonomy feature backs browsing.	Built

A3. Product Detail & Reviews

ID	User story & acceptance criteria	Status
C-10	As a buyer, I want to view full product details (photos, price, vendor, description), so that I can decide whether to buy.	Built

ID	User story & acceptance criteria	Status
C-11	As a buyer, I want to read other buyers' reviews on a product, so that I can judge quality before purchasing.	Built
C-12	As a buyer, I want to see the seller's store profile from a product page, so that I can check who I'm buying from.	Built

A4. Wishlist

ID	User story & acceptance criteria	Status
C-13	As a buyer, I want to save products to a wishlist, so that I can find them again later without re-searching. Add/remove and a dedicated wishlist list view.	Built

A5. Cart & Checkout

ID	User story & acceptance criteria	Status
C-14	As a buyer, I want to add products to a cart, so that I can buy multiple items in one order. Add/remove/update quantity.	Built
C-15	As a buyer, I want to check out with Cash on Delivery, so that I don't need a bank card to shop. COD is the only payment method; buyer sees one clean total (platform commission is never shown to the buyer). No real order-creation endpoint exists — checkout is fully mocked end-to-end.	Partial

A6. Orders & Tracking

ID	User story & acceptance criteria	Status
C-16	As a buyer, I want a list of my past and current orders, so that I can track what I've bought. Mocked data — no Orders backend.	Partial
C-17	As a buyer, I want to open an order's detail, so that I can see items, status, and delivery info. Mocked data.	Partial
C-18	As a buyer, I want to see live delivery status when a platform courier fulfills my order, so that I know when to expect it. Status reflects courier custody chain (picked up → delivered). Depends on the same mocked Orders backend.	Partial

A7. Send a Package

ID	User story & acceptance criteria	Status
C-19	As a user, I want to request a courier to pick up and deliver a package (not a marketplace order), so that I can send items peer-to-peer. Admin sets the price; cash collected at pickup.	Built
C-20	As a user, I want to see my past package delivery requests, so that I can track them.	Built

A8. Profile & Account Management

ID	User story & acceptance criteria	Status
C-21	As a user, I want to view and edit my profile, so that my name/photo/contact info stays current.	Built
C-22	As a user, I want an addresses screen to manage delivery addresses, so that checkout is faster. Currently an honest "not yet available" info screen, not real CRUD.	Stub
C-23	As a user, I want a payment-methods screen, so that I understand what payment options exist. Informational placeholder explaining COD-only — may stay permanently informational rather than become real CRUD given the COD-only model.	Stub
C-24	As a user, I want Settings, Change Password, My Reviews, Recently Viewed, and Analytics menu items, so that I can manage those aspects of my account. Generic "Coming Soon" placeholders today.	Stub
C-25	As a buyer, I want to chat with a seller, so that I can ask questions before buying. Route exists; "Coming Soon" placeholder, no messaging backend.	Stub
C-26	As a user, I want Help Center, Terms of Service, and Privacy Policy screens, so that I can find support and legal info. Static informational content.	Built

A9. Notifications

ID	User story & acceptance criteria	Status
C-27	As a user, I want push notifications for order updates, so that I don't have to keep checking the app. Working on Android. iOS push is blocked — no Apple Developer account yet to upload an APNs key; client-side push logic is verified working.	Partial
C-28	As a user, I want to control which notifications I receive, so that I'm not spammed. Dedicated settings screen with toggles.	Built

PART B — Vendor (Seller)

B1. Vendor Onboarding

ID	User story & acceptance criteria	Status
V-01	As a prospective seller, I want to register as a vendor with store details, so that I can start listing products. Multipart register (store name, documents/photos).	Built
V-02	As a vendor, I want to log in the same way as a buyer, so that there's one login flow per phone number. Shared login screen, role-aware redirect afterward.	Built

B2. Store Profile & Hours

ID	User story & acceptance criteria	Status
V-03	As a vendor, I want a public store profile buyers can view, so that buyers trust who they're buying from.	Built
V-04	As a vendor, I want to set my store's operating hours, so that buyers know when I'm active.	Built

B3. Listings Management

ID	User story & acceptance criteria	Status
V-05	As a vendor, I want to add a new product listing, so that I can start selling it. Category-based commission rate shown at listing time.	Built
V-06	As a vendor, I want to see "you earn X, platform fee Y" at listing time, so that I understand my margin before publishing. Commission breakdown widget on the add-listing screen.	Built
V-07	As a vendor, I want to view and manage all my listings in one place, so that I can edit, pause, or track them. Shows the wallet warn/pause banner inline.	Built
V-08	As a vendor whose owed commission crosses the pause threshold, I want to be blocked from publishing new listings, so that the platform limits its exposure to unpaid commission. Publish is blocked while paused. Does NOT un-publish already-live listings — a paused vendor can still take orders through listings published before the pause (known gap).	Partial

B4. Incoming Orders & Fulfillment

ID	User story & acceptance criteria	Status
V-09	As a vendor, I want to see incoming orders for my store, so that I can prepare and fulfill them. Mocked Orders backend.	Partial
V-10	As a vendor, I want an order's money breakdown (order total, my commission fee, my net), so that I know what I owe/earn. Computed live client-side from order total + rate.	Built

ID	User story & acceptance criteria	Status
V-11	As a vendor, I want to mark an order shipped/delivered when I self-fulfill it, so that the order lifecycle progresses and commission accrues correctly. Drives commission pending→due client-side; no real backend status-transition endpoint exists yet.	Partial

B5. Commission Wallet / Earnings

ID	User story & acceptance criteria	Status
V-12	As a vendor, I want to see my current owed commission balance, so that I know what I need to pay the platform. Sum of due, unsettled commission across orders. True weekly-cycle reset and a settlement-marking flow are not built — see the commission wallet settlement case document.	Partial
V-13	As a vendor, I want to be warned before I get paused, so that I can pay down my balance in time. Warn-threshold banner.	Built
V-14	As a vendor, I want an Earnings screen with my full statement history, so that I can reconcile what I've paid vs. owe. Currently a "Coming Soon" placeholder — this is Phase C of the commission design, not built.	Stub
V-15	As a vendor delivering through the platform's courier, I want the platform to collect cash and pay me net automatically, so that I don't have to separately settle commission on those orders. Courier-fulfilled orders never accrue owed-balance debt.	Built

B6. Vendor Profile & Notifications

ID	User story & acceptance criteria	Status
V-16	As a vendor, I want the same profile/notification tools as a buyer, so that I can manage my account consistently. Shared screens, role-aware content.	Built

PART C — Courier (Delivery)

C1. Courier Onboarding & Login

ID	User story & acceptance criteria	Status
D-01	As the platform owner, I want couriers to be admin-created (not self-registered), so that I control who can handle cash on my behalf. No courier self-register UI exists; accounts are created by the owner.	Built
D-02	As a courier, I want a dedicated login screen, so that I don't get confused with buyer/vendor login. Phone+password or phone+OTP. Backend has no courier auth yet — mock-mode login only.	Partial

C2. Delivery Run Management

ID	User story & acceptance criteria	Status
D-03	As a courier, I want to see my active delivery run (assigned orders), so that I know what to pick up and drop off next. Mocked backend — getCourierOrders 404s and falls back to filtered mock data.	Partial
D-04	As a courier, I want to see my delivery history, so that I can confirm what I've already completed.	Built
D-05	As a courier, I want to mark a delivery as failed with a reason, so that the order and cash accounting stay accurate. Fail-reason sheet; order status set to cancelled with reason.	Built
D-06	As a courier, I want to confirm a successful drop-off, so that the order is marked delivered and cash is logged. Deliver-confirm dialog.	Built

C3. Cash-in-Hand & Handover

ID	User story & acceptance criteria	Status
D-07	As a courier, I want to see my current cash-in-hand total, so that I know how much I owe the platform before handover. Sum of delivered COD order totals not yet handed over.	Built
D-08	As the platform owner, I want couriers flagged when their cash-in-hand crosses a threshold, so that I can prompt a handover before too much cash accumulates. Owner-set threshold constant. No actual handover/settlement-marking flow exists yet — display-only, same gap pattern as the vendor commission wallet.	Partial

C4. Navigation & Buyer Contact

ID	User story & acceptance criteria	Status
D-09	As a courier, I want turn-by-turn navigation to the buyer's address, so that I can find them without asking for directions. Opens Google Maps directions via a text-query address — orders carry no lat/lng on the wire yet.	Built

ID	User story & acceptance criteria	Status
D-10	As a courier, I want to call the buyer directly from the delivery card, so that I can coordinate hand-off. tel: deep link.	Built

PART D — Cross-Cutting / Platform

D1. Location & Catalog Taxonomy

ID	User story & acceptance criteria	Status
X-01	As the platform, I want a structured Egypt cities/governorates taxonomy, so that addresses, store locations, and (eventually) delivery zones are consistent. Built as data/taxonomy; not yet wired into a real delivery-zone feature.	Partial
X-02	As the platform, I want product categories and store categories, so that buyers can browse and vendors can classify their stores/listings.	Built

D2. Role-Based Navigation

ID	User story & acceptance criteria	Status
X-03	As any user, I want the app's navigation to match my role, so that I only see relevant screens. Role-aware redirect: courier home = /deliveries, blocked from buy-flow; non-couriers blocked from courier routes; bottom nav is role-switched.	Built

D3. Notifications Platform

ID	User story & acceptance criteria	Status
X-04	As the platform, I want a single notification system usable across all three roles, so that order/delivery/commission events reach the right user. Working on Android; iOS blocked pending an Apple Developer account for APNs.	Partial

Total: 28 consumer, 16 vendor, 10 courier, and 4 cross-cutting stories (58 total) across the app as of 2026-08-09. Status reflects the current codebase, not the original design intent — several "Partial" items are fully built on the client and only waiting on backend endpoints that don't exist yet.
